CAR CARE**

Products for professionals

Description:

Extremely viscous and effective under-the-hood engine cleaner. This solvent-free product effortlessly removes contaminants such as oil, grease and tectyl thanks to its intensive penetration time.

Benefits:

- Solvent-free, therefore much more environmentally friendly than solvent based products
- High viscosity product, meaning longer exposure time - even in summer
- Effortlessly dissolves grease, oil and road grime

Application:

Engines and parts contaminated with dirt, oil and grease.

Also: Cleaning of doorposts. Cleaning of garage floors. Removal of silicone rubber and sealant from car damage repairers.

Directions for use:

Under the hood: mist the entire engine compartment with Engine Cleaner MV40. Depending on the pollution, use the product from neat to a maximum of 1:3. Then leave for 1-5 minutes. In case of stubborn deposits, use a brush. Then clean the engine compartment with a high-pressure sprayer. For an "as new result" spray the drying engine compartment with Motor Fresh.

Tips & tricks:

For doorposts it is very convenient to apply Engine Cleaner MV40 with an IK-9 pump. Thanks to the long spray lance, difficult-to-reach places such as behind the hinges and at the bottom of the door are reached. Leave on for 1-5 minutes and spray clean the door pillar with a high-pressure sprayer. Aim the high-pressure sprayer from the inside out so that the inside does not get wet.
