## INGENIOUS CAR CARE

Products for professionals

### Description:

Vinyl gives plastic parts, bumpers and tyres a new and original look. It also gives a good protection

### Benefits:

- Immediately visible result
- Returns plastic original look
- Dries evenly and is non-greasy
- Leaves tyres looking like new
- Great protection
- Satin finish

### Application:

Vinyl is the 'finishing touch' when treating the plastic parts, bumpers and tyres of vehicles. The special formula gives these materials a silky matt and original look. It also protects against weather influences. It can also be used to maintain door rubbers. Especially in winter it protects against freezing. Vinyl is also available as silicone-free.

### Directions for use:

Shake well before use. Apply Vinyl using the special vinyl applicator to the parts to be treated, such as plastic parts, bumpers and tyres. Let it soak in for a while and then rub with the slightly dried applicator. On highly absorbent surfaces, the treatment can be repeated for an even deeper result. Always test the product on an inconspicuous place before use to avoid possible damage. Ensure a well-ventilated area.

### Tips & tricks:

On small surfaces, work with the tip of the applicator.

Use a separate sponge for the tyres because of the blackening of the applicator. On small areas, work with the tip of the applicator, or cut a applicator through the middle. For car tyres it can also be sprayed with a sprayer or pressure pump.
