Products for professionals

Description:

Fallout Remover is an effective cleaner for removing rust, metal particles and brake dust from car paint, wheels and windows.

Benefits:

- pH neutral product
- Safe to use
- Can also be used as a pre-cleaner
- Visible result through purple discoloration of the particles
- Very effective
- Better smell compared to the same type of products

Application:

Fallout remover easily removes iron particles such as fly rust and brake dust from the surface. Iron particles get onto cars through car braking, the overhead wires of train tracks and metal industry. These iron particles fall onto the paintwork, rust and destroy the paintwork. These difficult to remove particles can be removed quickly and effectively by washing the car with Fallout Remover. This pH neutral product reacts with iron particles, creating a purple “bleeding” effect and dissolves the metal particles. The application can be done with a sponge, but also with clay products to speed up the effect. Fallout Remover cleans stubborn brake dust and road grime, making it excellent for use as a safe pH neutral rim cleaner.

Directions for use:

Apply Fallout Remover to the surface to be treated and then let it take effect. On paintwork within minutes you can see exactly where the metal particles are because they turn purple. Use clay pad/clay disc/clay cloth to speed up the removal of fallout. Rinse with clean water before the Fallout Remover dries. In case of persistent soiling, the treatment can be repeated. When used on wheels, rinse the product before the purple color turns to brown. Fallout Remover is a PH-neutral product which means that in principle it cannot damage paints, wheels, hubcaps, windows, chrome and metals. However, it is recommended to test on an inconspicuous area first.

Tips & Tricks:

If you want to clay the car's paint with Fallout Remover, clean the paint first with Royal Forte. This will remove all the loose dirt and prevent you from scratching it. Make sure when applying that there is no more water film on the paint. This ensures that the Fallout Remover less well to the rust and metal particles can adhere. Spray the entire car with Fallout Remover and clay the paint with a Claypad or clay block. Afterwards, spray the entire car clean. Do not use Fallout Remover in full sun to prevent the product from drying too quickly.
